Internship Assignment

Problem Statement

You are developing a django based web application to help patients upload PDF documents. These documents will be reviewed by doctors further.

It should have following features:
- Patients should be able to provide name, description and upload document.
- Patient should be able to upload multiple document
- After document upload, patient should be able to generate QR code for each document
- QR code will have
    - Patient Name
    - Document Name
    - Document Link

Outcome to be submitted:
- Format: zip. Naming convention : <your_name>.zip
- It should contain following files:
    - src : it should contain all code files along with readme.txt
    - Test.xlsx : This is a testing sheet where you put all test cases. Put extensive test cases around features you are developing. It should contain following columns
        - Test case
        - Expected Outcome
        - Actual Outcome

Evaluation Criteria

- Functional and Well tested code
- UI & UX
- Code organization
- Code readability
